iWAM MEAP

Track document usage
and control costs

Gain a thorough insight into your document output

With a Canon multifunctional device on your network, there's a wealth of capabilities available to your organisation. So it makes sound business sense to know your staff are using them effectively and affordably. With Canon's cost-effective iWAM MEAP software, now you can. Effortless installation, directly into your Canon print device, provides the inside knowledge to enable you to manage and reduce output costs.

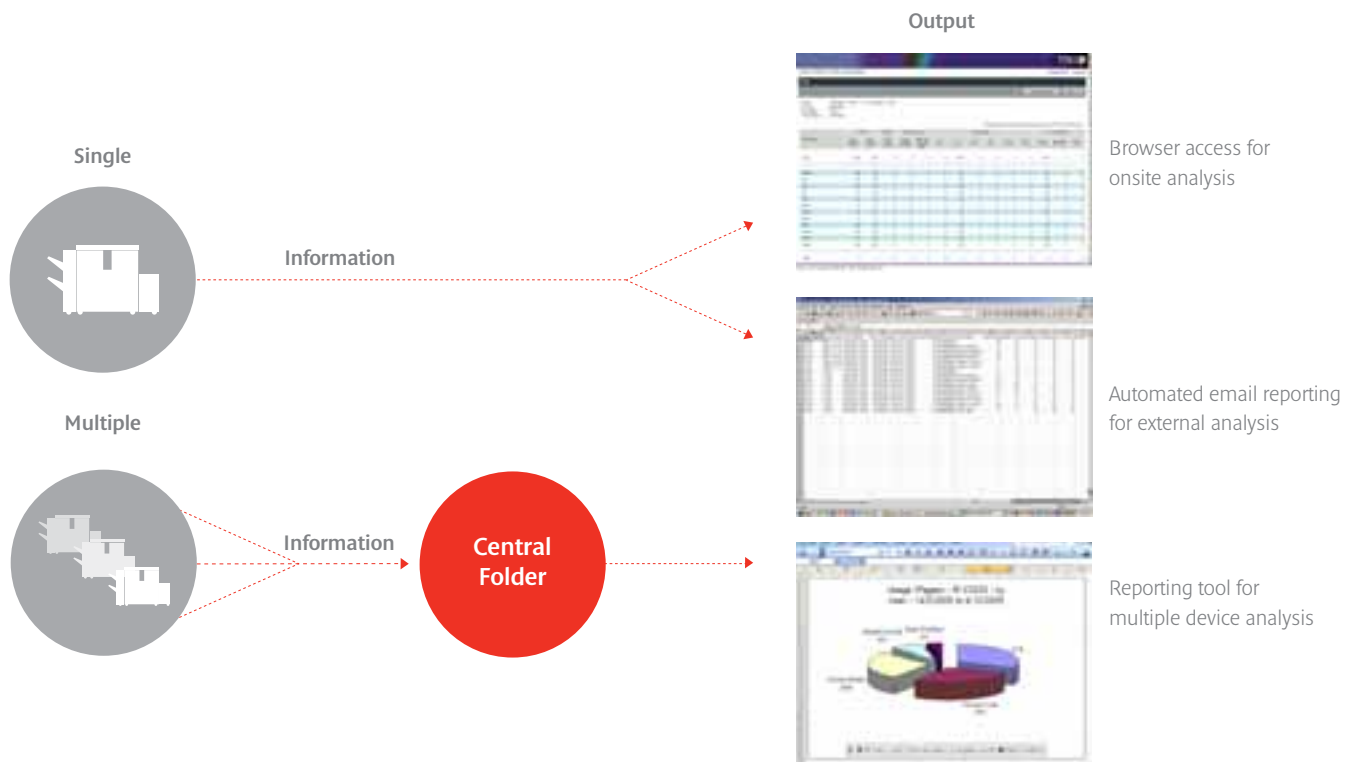

iWAM MEAP will help you to manage your costs using any Canon MEAP-enabled print device.

Benefit now, benefit tomorrow

Canon's Multifunctional Embedded Application Platform (MEAP) is a Java™ based application platform that's incorporated within the latest Canon devices, enabling iWAM MEAP and other softwares to be made available to your business.

Different ways to control office output using iWAM MEAP

Analysis without effort

With Canon's iWAM MEAP solution you can really get to grips with what is being done on your office devices. Detailed analysis of printing, copying, faxing and scanning activities is achievable with a software accountant that integrates directly into your Canon device. Whenever a job is carried out, iWAM MEAP will record it, so you can assess the number of pages produced, the size and type of job; by department, user or device. Armed with the automated management reports that the software provides, you can gain a firm grip on all your office output, re-educate your staff and implement cost reductions activities.

Cost control with no IT overheads

To incorporate iWAM MEAP into your business environment is more cost-effective than you might think. Unlike some larger, enterprise solutions, iWAM MEAP is a practical, affordable solution that integrates directly into your Canon device. And as there are no servers or IT resources required, once installed, you can instantly begin to improve your office output expenditure.

Use colour to maximum effect

It's easy to see the powerful impact that colour makes to document output. And now with iWAM MEAP in your office, you can assess how colour is being used and then decide when and how it is best used in future. As a result, you can reduce your total expenditure and still maintain the visual presence of your business communication.

Key Benefits

- Schedule automated reports providing thorough document output analysis that enable you to make quick cost-saving decisions.
- Determine how and when to use colour in your business for maximum impact at minimum cost.
- Cost effective solution that's ideal for small-to-medium sized businesses.
- Track usage by device and/or user to help manage costs.
- Analyse multiple devices using a small PC application.
